WARNING ON CARBON MONOXIDE GAS IN CARS

Richmond, Va.- Following the recent deaths in Louisa County of two children from carbon monoxide while they were passengers in an automobile, Captain R. B. King, Assistant Administrator of the Governor's Highway Safety Committee and State Police Safety Officer, has outlined the dangers of this deadly gas.

He pointed out that carbon monoxide forms about 5 per cent of an automobile's exhaust fumes and that the breathing of air containing as much as four hundredths of one per cent can be fatal. The fact that the gas is odorless, colorless and tasteless greatly increases the danger.

Usually, he said, concentrations are not great enough to cause immediate unconsciousness. The potential victim's first warning is a dull headache which is followed by dizziness and drowsiness. These are often attributed to other causes and the person affected takes an aspirin tablet and continues to drive. "A great number of unexplained crashes might easily be traced to non-fatal carbon monoxide poisoning, since the seness of drivers are dulled to the point at which they cannot control their vehicles," he observed.

Captain King further pointed out that recent information indicates strongly that it is most hazardous to drive with the lid of the luggage compartment even partially open. The air rushing along the sides of the vehicle creates a low pressure area directly behind it and exhaust fumes can be sucked into the vehicle through the opening.

In closing, Captain King issued the following warnings:

1. At the first signs of unusual headache, dizziness, weakness or drowsiness, stop and have your exhaust system thoroughly checked by a competent mechanic.

2. Never run an engine in a closed garage and refrain from running the engine for any extended period while the vehicle is standing.

3. Do not follow closely behind a vehicle with a smoking exhaust.

4. It is always best to keep a window partly open, even in cold weather.

5. Have your exhaust system checked regularly.

6. Never drive for extended periods without stopping to ventilate thoroughly ventilate your vehicle.

Mrs. S. S. Shouse was not present to present the report of the Fine Arts Department, of which she is chairman.

The club was delighted to have as its guest speaker, Mrs. Joel W. Flagd, president of The Alice Kyle District. Mrs. Flood stressed the promotion of the Federation objectives and the Golden Anniversary, with each club having a birthday celebration. She suggested that each club sponsor a community service project and that it be one which meets a particular need in the community She told of the Club History now being compiled and which will be placed on sale at the Golden Jubilee Convention.

Mrs. Flood announced a meeting of the Board of Directors of The Alice Kyle District to be held in the Educational Rooms of Liberty Baptist Church Tuesday, Sept. 18, beginning at 10:00 A. M. Approximately 75 club members from the district are expected to attend.

Laundry Hints

Clothes should be taken out of the automatic dryer before they get thoroughly dry and the wrinkles become "set."

The grey dinginess of cottons and the brittle hardness of towels often are caused by poor rinsing. When sprinkling clothes for ironing, remember that warm water penetrates faster and more evenly than cold.

WINTER COVER CROPS ARE RECOMMENDED

Blacksburg, Va.- Farmers can reap multiple benefits by seeding winter cover crops on all or this year's cropland which would normally lie unprotected, advises G. R. Epperson, Associate Extension Agronomist of Virginia Polytechnic Institute.

"Green cover, for example, holds soil in place, takes up plant nutrients, and adds organic matter to the soil. This results in decreased loss of fertility and soil through leaching and run-off, improved soil tilth and many other soil benefits," continued Epperson.

"Many farmers report production of from 100 to 250 pounds of gain per acre on beef cattle from November through March—the period a cover crop can be expected to furnish grazing. Top quality early lambs in many instances are dropped and grown on one of the best ewe and lamb feeds, cover crops. Dry cows and growing dairy heifers do well on cover crops. One acre, properly managed in a good growing season, will furnish 4 to 6 weeks of grazing for 4 to 6 cows or one to two dozen ewes and their lambs.

"Popular winter cover crop materials include small grains, crimson clover, vetch and rye grass. Any of several combinations are recommended. Small grain mixtures, small grain and vetch, and many others.

"Seed early — from now into October. Fertilize adequately, based on the kind of soil and its fertility level. Where cover crops follow heavily fertilized crops such as tobacco and vegetable crops, 200 to 300 lbs. of 5-10-10 or 4-12-12 may be enough. On soils with less fertility, 500 to 800 lbs. of 10-10-10 or 5-10-10 will usually be needed. Nitrogen should be used at the time of seeding to stimulate growth for fall and winter grazing. Spring growth can be boosted by nitrogen applications in January or February.

"Seed at the rate of 2 to 4 bushels of small grain, 1½ to 2 bushels of small grain and 15 lbs. of vetch, 15 lbs. of crimson clover and 15 lbs. rye grass; all on a per acre basis."
